Instructions for the Universal Pistol Adapter

The **Universal Pistol Adapter**, or UPA, is a device that is used in conjunction with the Rail Vise and allows for the holding of various semi-auto pistols. The same basic platform is used for all semi-auto pistols that use a "double stack" magazine.

What makes the UPA universal are the replaceable inserts that are specific to various pistol makes and models.

Each set of four (4) inserts is composed of two (2) inserts identified with the letter "A" and two (2) inserts identified with the letter "B". Each insert set is also identified with the set number. For example, each set of four (4) inserts might contain two (2) inserts labeled "1 A" and two (2) inserts labeled "1 B".

Each UPA is also identified to ensure that the inserts are installed properly. The UPA has two (2) positions identified as "A" and two (2) identified as "B". All that is required is to match up the inserts to the proper position. The inserts "snap" into position so that there is no chance that they fall out.

While we have identified a number of pistols and their corresponding inserts, the list is not static and there are pistols added all of the time. Check back often for the latest list. It will be in the "Support" tab and titled "Insert Matrix".

If you find an insert/pistol combination that is not listed, we would love to hear from you. The "Insert Matrix" will be updated accordingly.
